

Cookie Policy

Version 1.1 | 8 October 2026

Operator: ARGAN Krzysztof Janosik, Chodów 4a, 32-250 Chodów, Poland; NIP 6591561560. Contact: support@quickchunk.com. This notice supplements the Privacy Policy.

1. What cookies do

Cookies are small pieces of information stored by a browser and sent with relevant requests. Similar technologies can include browser storage and temporary in-memory state. They are used only for a defined purpose; describing a technology in this notice is not permission to use it for unrelated purposes.

2. Essential account sessions

The QuickChunk dashboard uses the first-party cookie quickchunk_session to maintain an authenticated session and enable account access. Its configured lifetime is up to seven days from issue; issuing a new session can replace that lifetime. It contains a signed session token associated with the account, rather than the account password. It is set with HttpOnly and SameSite protections and uses Secure on the production HTTPS service.

Authentication sessions are necessary for the dashboard features you request. Rejecting or deleting this cookie can sign you out and prevent protected features from operating. Public landing content and directory information do not require signing into the dashboard. Essential session storage is not advertising consent.

3. Network and security technologies

Cloudflare may use strictly necessary security cookies when the corresponding protection features are enabled, for example to distinguish legitimate requests from automated abuse or remember completion of a security challenge. Names and lifetimes depend on the enabled feature; they are not used by QuickChunk to establish advertising consent. Provider documentation explains the cookies applied by those features at <https://developers.cloudflare.com/fundamentals/reference/policies-compliances/cloudflare-cookies/>.

Technical request logs are server records, not browser cookies. Their purposes and retention are described in the Privacy Policy. The fact that a security provider operates the network does not authorize unrelated tracking.

4. Landing functionality and optional tracking

The landing application does not embed advertising pixels or independent analytics trackers. Searching the directory, selecting a filter and displaying a clipboard confirmation use temporary page state; the landing does not need to store a new account profile or server submission in the visitor's browser for those features.

We do not activate non-essential cookies or similar trackers simply because a visitor continues browsing. If non-essential analytics, advertising or other optional storage is introduced, it must be disclosed and subject to any required prior consent, with a real means to decline and withdraw consent. A future policy update is not a substitute for that consent.

5. Payment and authentication providers

When you choose a payment option or Microsoft/Minecraft authentication, the relevant provider may use its own cookies or technologies on its pages or embedded payment flow. Providers can include PayPal, Simpay, Stripe and Microsoft, depending on the feature selected. Their notices apply to their independent processing and explain their storage controls. QuickChunk does not treat selection of one provider as consent to unrelated providers' tracking.

The public landing's links to external documents or services do not themselves give those providers access to your QuickChunk password. Opening a linked page generates a request to that destination and may involve its own security or session technologies.

6. Your controls

You can inspect and delete stored cookies using your browser's privacy settings and limit future storage. Blocking essential session or security storage may prevent login, a security challenge or a requested transaction from working. Browser settings alone are not presented as a replacement for prior consent when consent is legally required.

If optional consent-based tools are introduced, their controls must allow you to change your choice. Withdrawing consent does not affect earlier lawful processing. Questions about cookies and privacy can be sent to support@quickchunk.com. Further information about rights and data handling is in the Privacy Policy at <https://cdn.quickchunk.com/privacy-policy.pdf?v=20261009>.
